IPerCom-2Voice schematic

IPerCom-2Voice with iPassan schematic

Network installation and configuration requirements

The installation should be installed, tested and documented as per the following standards –

European Committee for Electrotechnical Standardisation (CENELEC)

EN 50173 Information Technology – Generic Cabling Systems

EN 50173-1:2011 General requirements
EN 50173-2:2007 + A1:2010 Office Premises
EN 50173-3:2007 + A1:2010 Industrial Premises
EN 50173-4:2007 + A1:2010 Residential Premises

EN 50173-5:2007 + A1:2010 Data Centers

EN50173-6: Distributed Building Services

CENELEC also produce the EN50174 series of standards that are concerned with the way in which cabling systems are designed and installed —

EN 50174-1:2009 + A2:2004 Specification and Quality Assurance

EN 50174-2:2009 + A2:2004 Installation planning & practices inside buildings EN 50174-3:2013 Installation planning & practices outside buildings

Another relevant CENELEC standard is -

EN 50310:2010 Application of equipotential bonding and earthing in

buildings with information technology equipment

British Standards Institute (BSI)

BSI adopts all CENELEC standards and prefix them with their authority code, i.e. EN 50174-1:2009 + A2:2004 becomes BS EN 50174-1:2009 + A2:2004

BSI also produces its own national standards –

BS 6701:2010 Telecommunications equipment and telecommunications cabling.

Specification for installation, operation and maintenance.

BS 7671 Requirements for Electrical Installations. IET Wiring

Regulations (18th Edition).

BS6701:2010 states: All telecommunications cabling and telecommunications equipment shall meet the requirements of the BS EN 50174 series of standards. This relates to both owners of premises (Clause 4) and installers of telecommunications cabling and telecommunications equipment (Clause 5). Note that the use of the word 'shall' is prescriptive and as such, is a legal requirement.

Urmet recommends adherence to the BS EN 50173 and BS 50174 series of standards, together with the relevent parts of BS 6701 and BS7671 to ensure a fully compliant installation that conforms to UK legal requirements. It is the responsibility of the installer to ensure that their practices are in accordance with the latest published editions of the relevant standards.

Specific network requirements for IPerCom are as follows -

IGMPv2 or IGMPv3 Multicast Service must be enabled.

The following ports must be open and not restricted –

TCP ports 2049, 51234, 5060, 50118, 3306, 13451 to 3460, 111, 80, 433, 41365, 22,

918 & 40279.

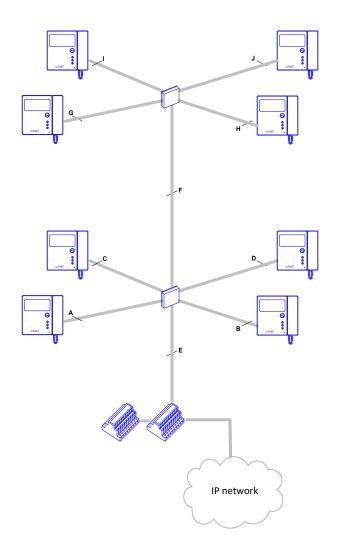

UDP ports 32768, 2049, 514, 32771, 34956, 917, 34839, 67, 5060, 69, 975, 111, 123.

Multicast must be enabled on 238.0.0.200:55000 and on 239.255.0.200 (all ports).

TCP/UDP ports used for Internet access (if any) TCP:5060,6060 UDP:5060,6060.

Bandwidth per end point (Kbps) 2500 for upload and 10000 for download.

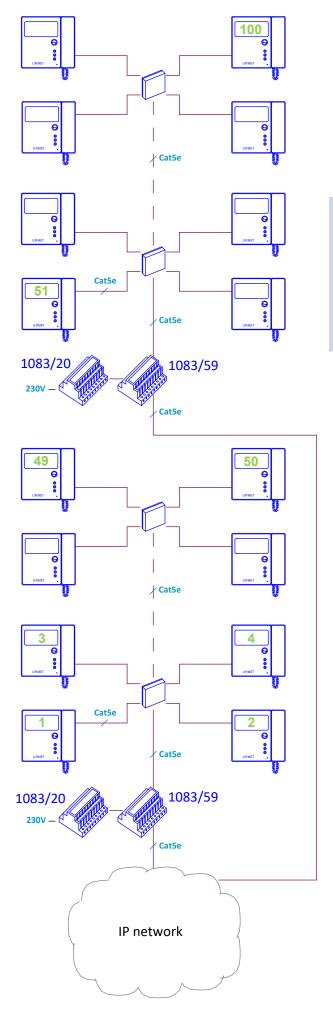

Specific installation requirements for the 2Voice riser -

When adding all of the branches together in the riser (A + B + C....+ J) the maximum total amount of cable must not exceed 800M.

Additional 1083/59 Gateways can be installed to achieve installations where more than 800M of cable is required.

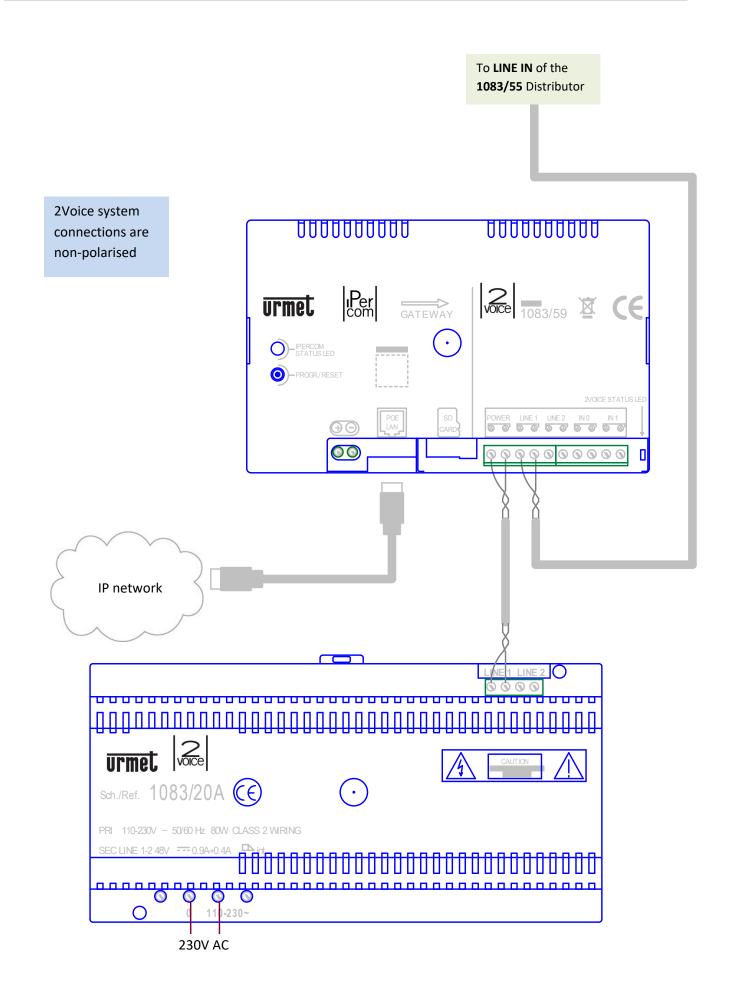

As a general guide, after every 50 monitors another 1083/59 (and 1083/20) should be used – See example on Page 5

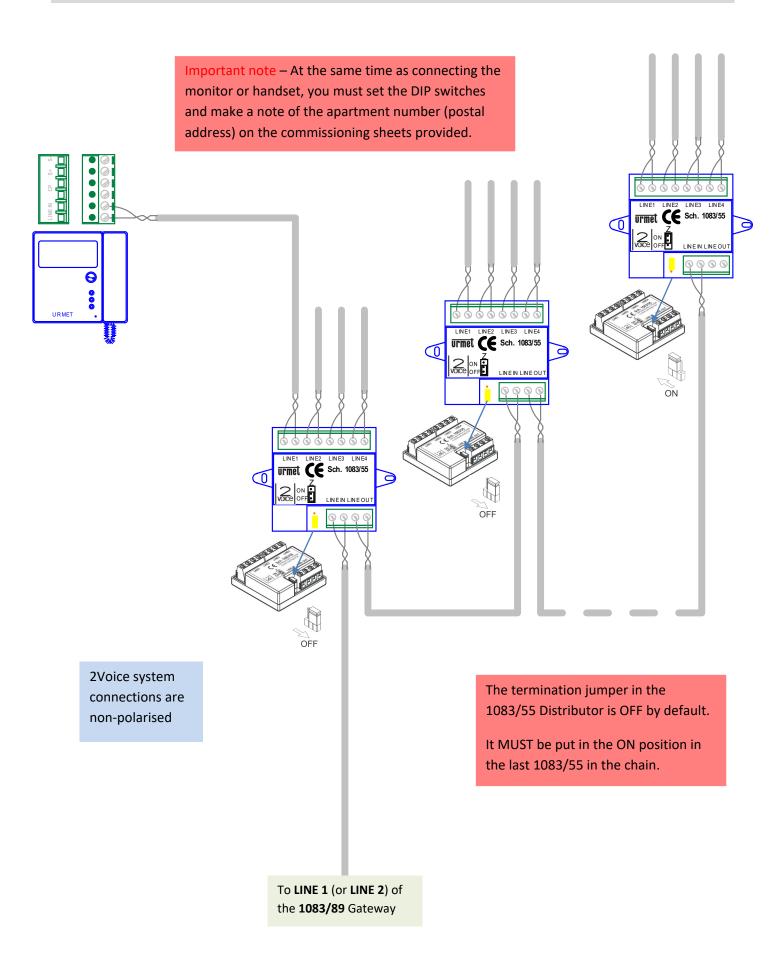

This method is used where there are more than 50 monitors in a building.

Any number of 1083/59 Gateways and 1083/20 Power Supplies can be used to increase the number of monitors in a building as required.

System connections

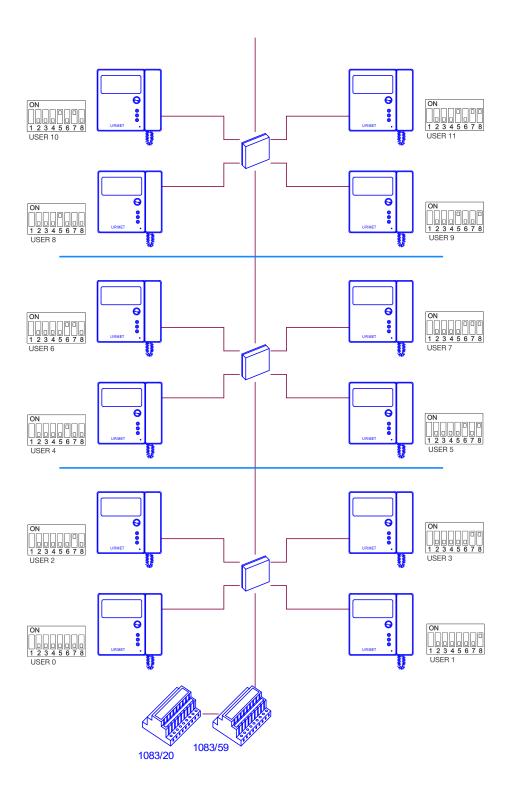

System connections continued

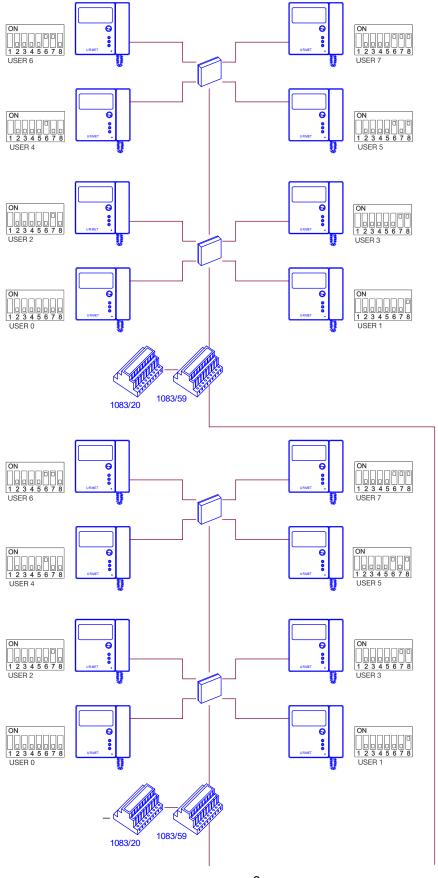

Monitor and handset DIP switches

Regardless of the apartment postal addresses, the DIP switches *must* start at USER 0 (binary address 0), and increase consecutively as shown below –

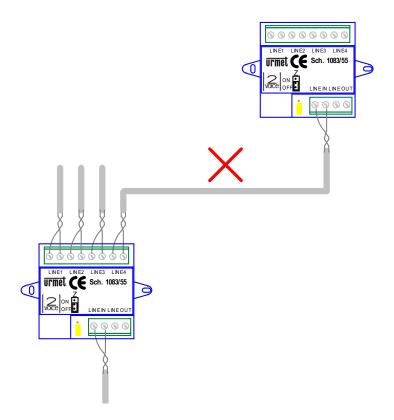

Monitor and handset DIP switches

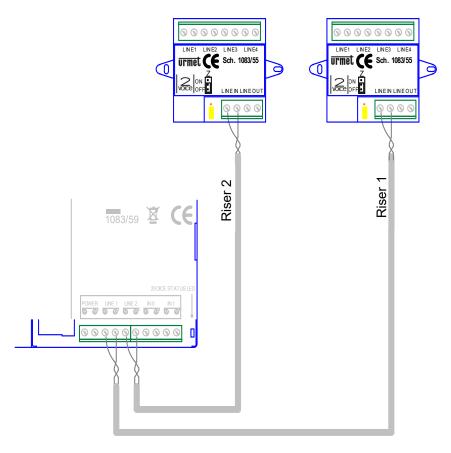

In systems where the riser or block is split into sections using more than one 1083/59 Gateway, the monitor or handset DIP switches for <u>each section</u> *must* start at USER 0 (binary address 0) –

To create a second riser, you CANNOT connect 1083/55 Distributors in this way -

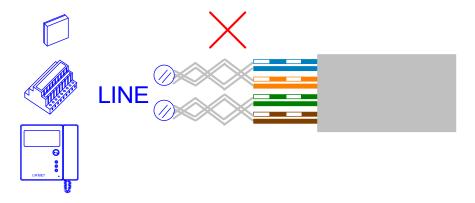

A second riser can be created using the LINE 2 output on the 1083/59 Gateway –

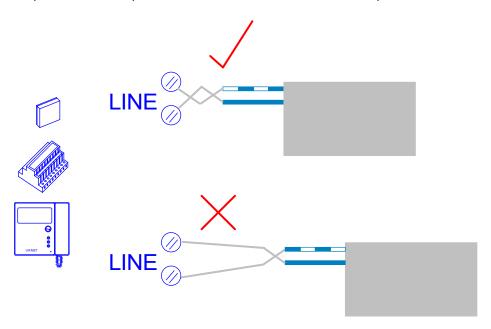

2Voice riser connection rules continued

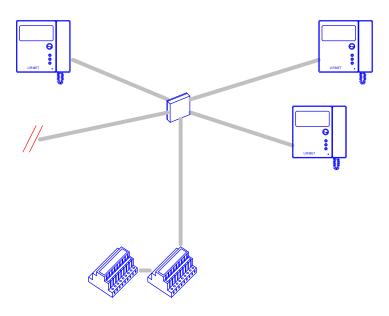

Do not 'double up' any 2Voice connections -

Keep the conductor pairs twisted as close to the terminals as possible –

Do not leave cables terminated at one end and un-terminated at the other –

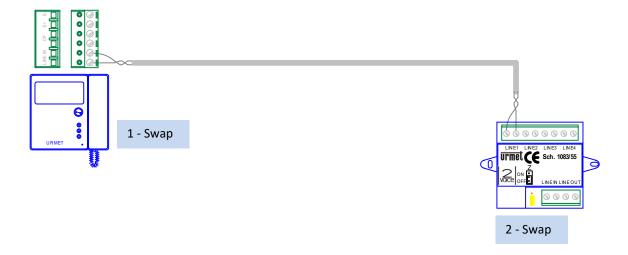

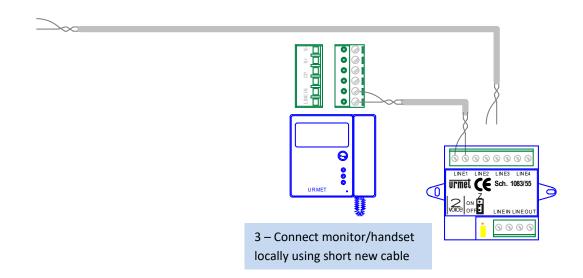

2Voice riser fault finding

If the fault is limited to one monitor or handset -

Assuming that the configuration and DIP switches have been checked first and are correct, the issue is either the 1083/55 Distributor, the cable between the 1083/55 and the monitor/handset, or the monitor/handset itself.

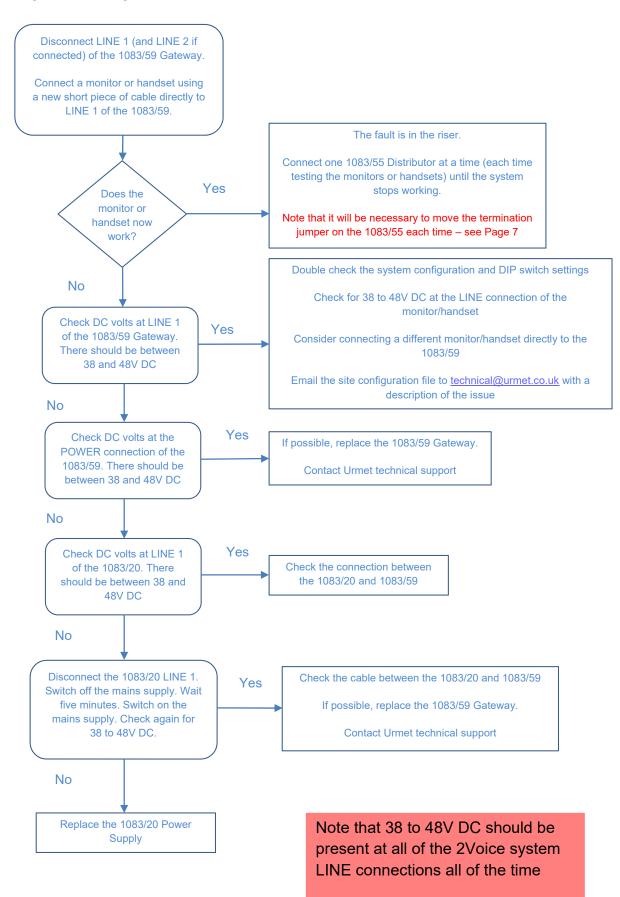

- 1. Rule out the monitor/handset Swap the monitor/handset for a known working unit, not forgetting to adjust the DIP switches.
- 2. Rule out the 1083/55 Distributor Swap the 1083/55 for a known working unit.
- 3. Rule out the cable Take the monitor/handset and connect it directly to the 1083/55 Distributor on a short new piece of cable.

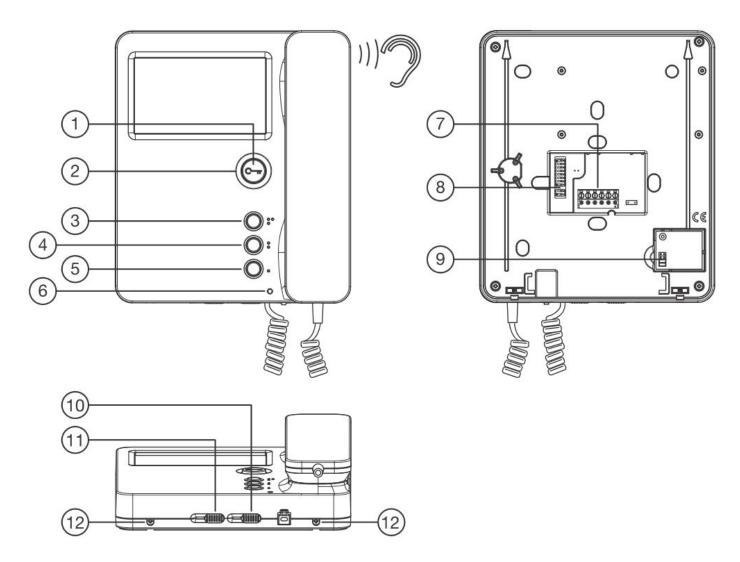

If the fault is affecting the whole riser -

Assuming that the configuration and DIP switches have been checked first and are correct –

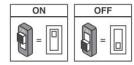

1750/1 Miro video monitor

Controls and functions -

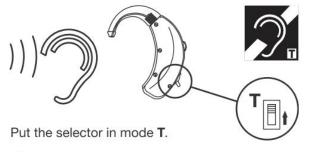

- 1. Door opener button
- 2. Green LED under door opening button
- 3. Button
- 4. Button
- 5. Button •
- 6. Two-colour LED
- 7. Terminals for connecting to the system
- 8. Configuration dip switch:
 - a. 2 to define the monitor number within the apartment
 - b. 8 to define the address in the system

DIP switch settings are shown at the end of this manual.

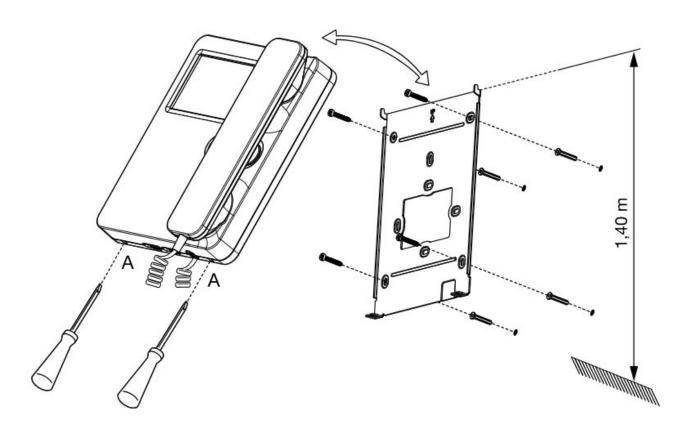

- 9. In-out connection setup with Ref. 1750/50
- 10. Brightness
- 11. Colour
- 12. Screws for fixing video door phone to bracket

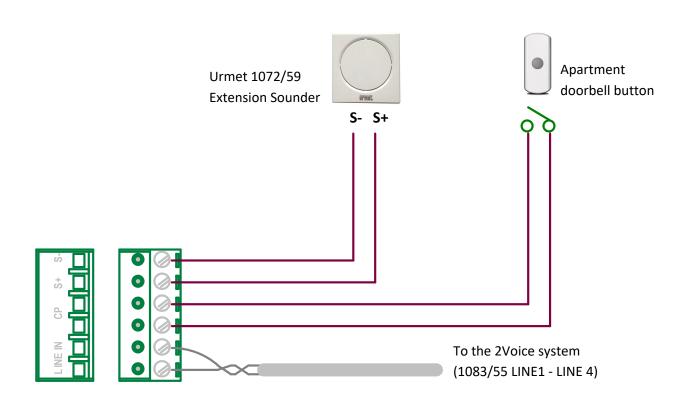

Device compatible with all hearing aids with operating mode T (Standards ETS 300381 and EN 60118).

Installation -

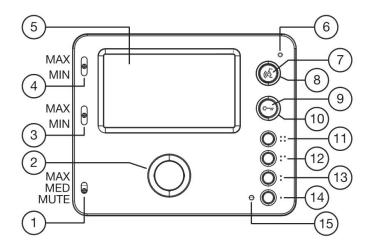

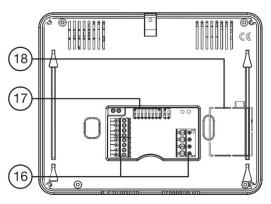

Connections -

1750/5 (Black) & 1750/6 (white) Miro hands-free video monitor

Controls and functions -

- 1. Call volume adjustment (MAX, MEDIUM; MUTE)
- 2. Call and conversation speaker
- 3. Display brightness adjustment
- 4. Display colour intensity adjustment
- 5. Display 4.3" format 16:9
- 6. Microphone
- 7. Button & used to activate/deactivate audio
- 8. Green LED under the 6 button
- 9. Cm door opener button
- 10. Green LED under the C button
- 11. Button to connect to Yokis devices; N.O. contact Y1 Y2: max 50 mA @ 24V DC
- 12. Button to connect to Yokis devices; N.O. contact X1 X2: max 50 mA @ 24V DC
- 13. Button : see button function table in manual supplied with the product
- 14. Button ●: see button function table in manual supplied with the product
- 15. Multicolour indicator LED
- 16. Terminals for connecting to the system
- 17. Configuration dip switch:
 - Switch 1 of SW1, defines the video door phone operating mode: OFF "Hands Free" (default) / ON "Push to talk"
 - Switches 2-8 of SW1, define the address within the system.
 - Switches 1 & 2 of SW2, define the monitor number within the apartment.

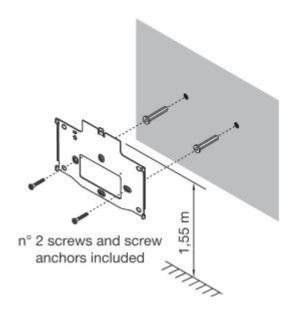

DIP switch settings are shown at the end of this manual.

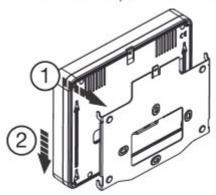

18. Cover can be removed to fit in-out connection accessory 1750/50

The miro video door phone is equipped with a built in hearing aid device that works only during the video door phone calls.

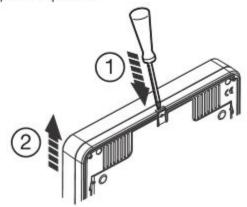

Installation -

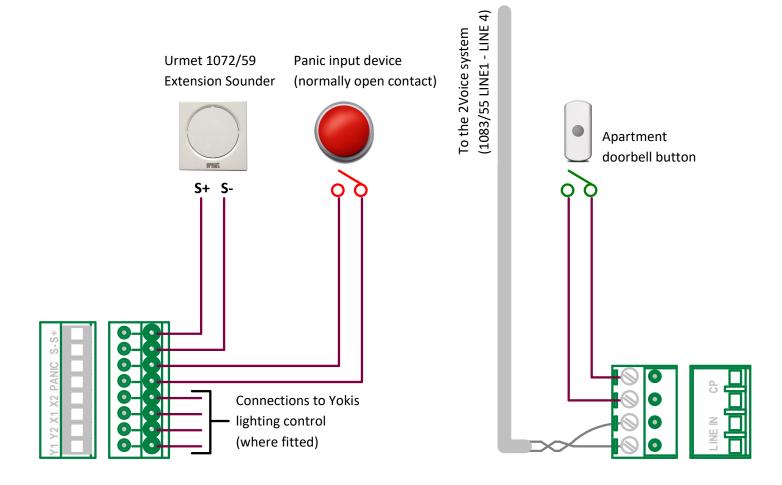

Make the connections. Fix the video door phone to the bracket.

To remove the video door phone from the bracket, insert the tip of a screwdriver into the seating as indicated in the figure and push the video door phone upwards.

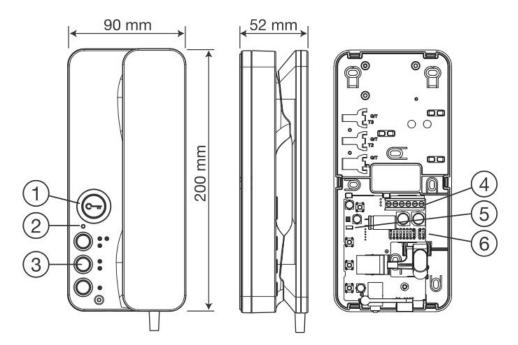

Connections -

1183/5 Audio handset

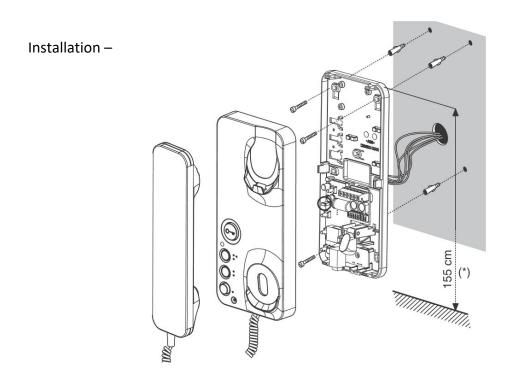

Controls and functions -

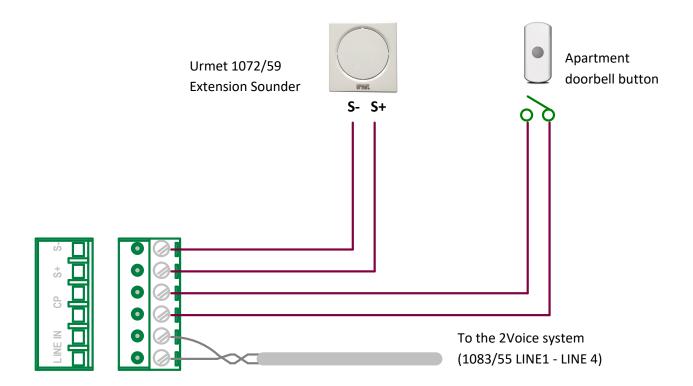

- Door opener button 🖳 1.
- Multicolour led
 Buttons (•, •, •)
 Terminal boards
- 5. Line termination Jumper

6. Configuration dip switch

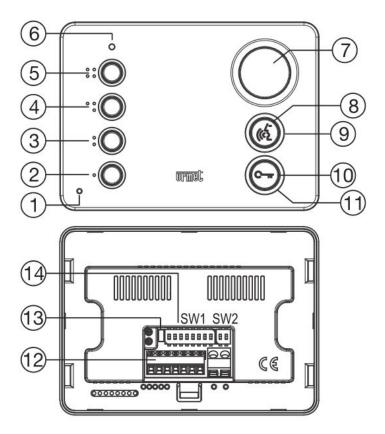

Connections -

1183/7 Hands-free audio station

Controls and functions -

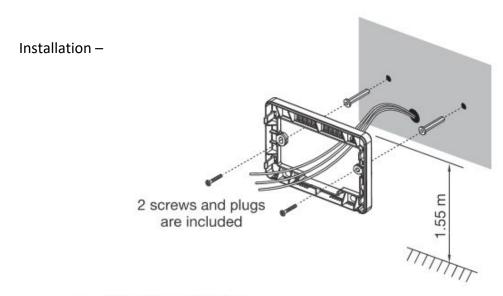

- 1. Microphone
- 2. Button see button function table
- 3. Button see button function table
- 4. Button to connect to Yokis devices; contacts X1, GT: max 50 mA @ 12V DC
- 5. Button to connect to Yokis devices; contacts Y1, GT: max 50 mA @ 12V DC
- Multicolour indicator LED
- 7. Call and conversation speaker
- 8. Button (used to activate/deactivate audio
- 9. Green LED under the 6 button
- 10. On Door opener button
- 11. Green LED under the C button
- 12. Terminals for connecting to the system
- 13. Line termination jumper

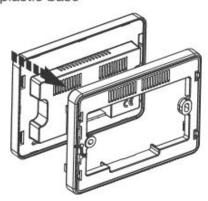

- 14. Configuration dip switch (SW1 SW2):
 - n.1 of SW1, defines the door phone operating mode: OFF "Hands Free" (default) / ON "Push to talk"
 - 2 to 8 of SW1, define the apartment number in the column;
 - 1 to 2 of SW2, define the station number in the apartment.

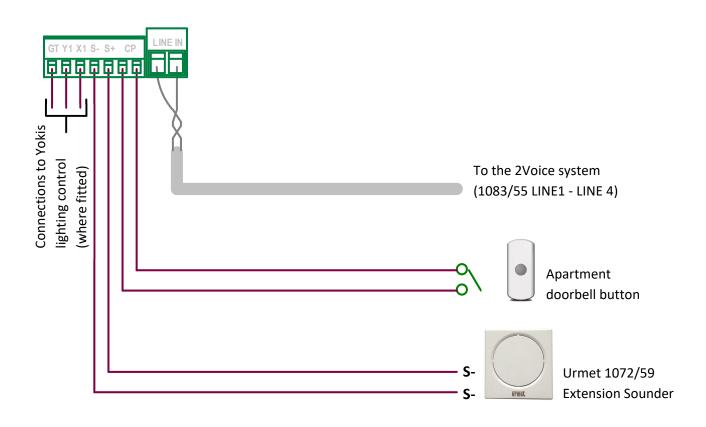

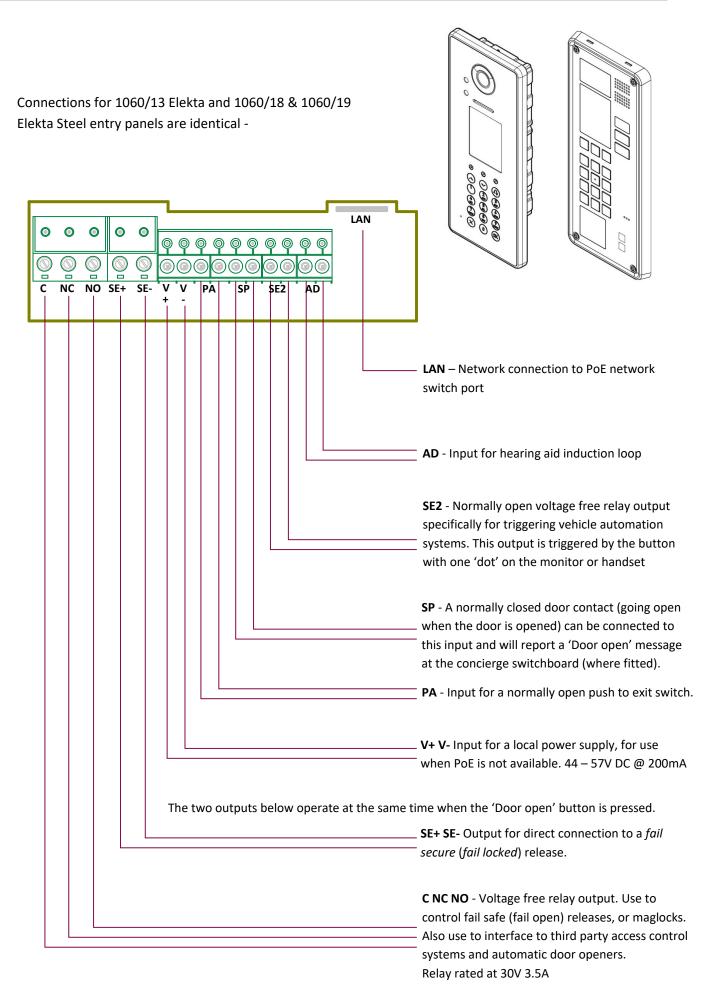

- · Make the connections
- · Fix the unit to its plastic base

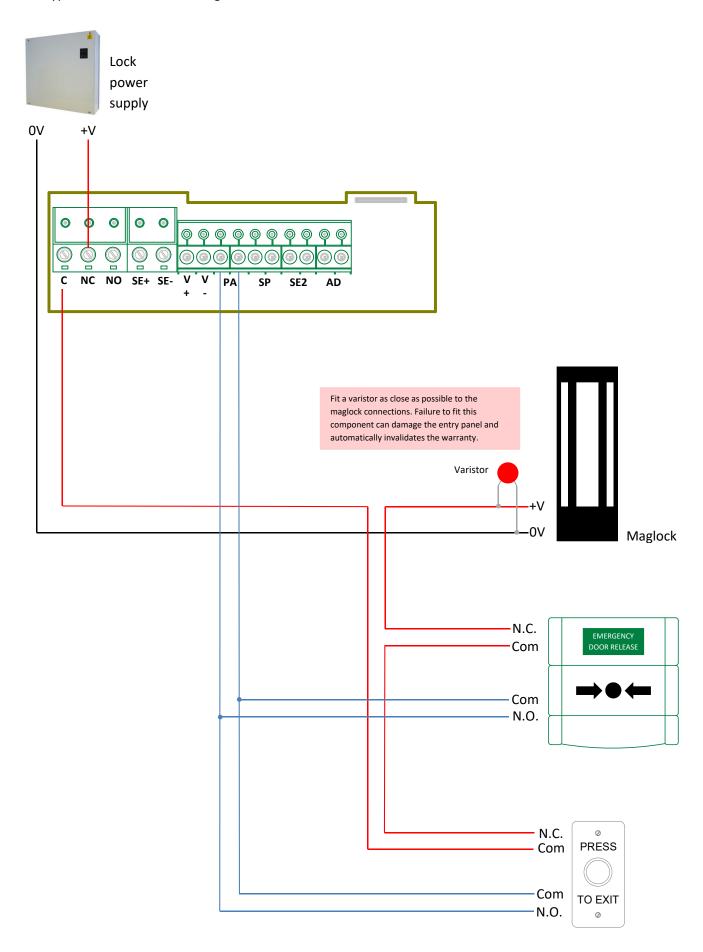

Connections -

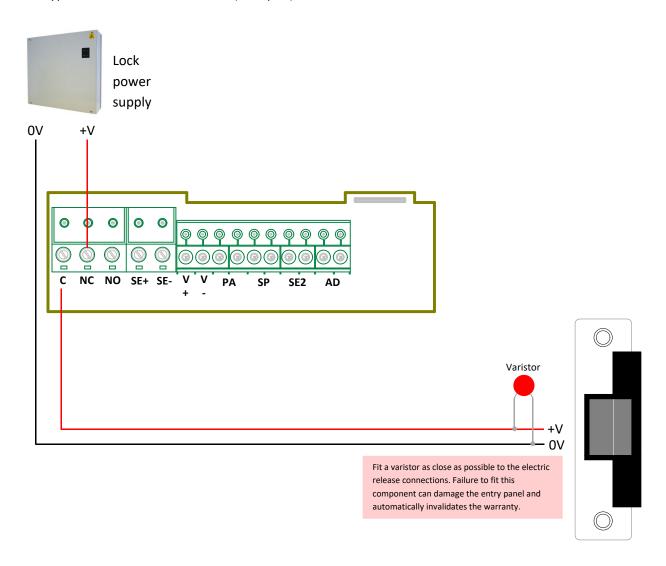

1060/13 Elekta, 1060/18 & 1060/19 Elekta Steel Call Modules

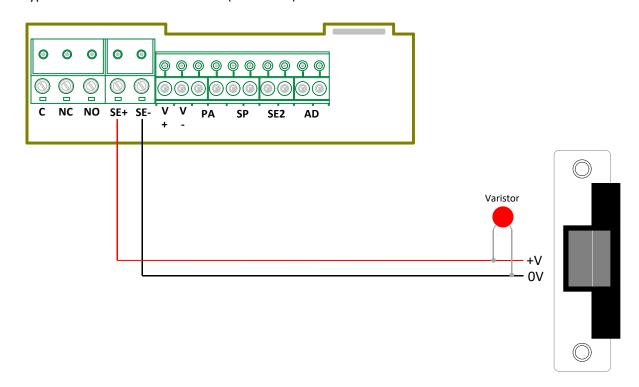

Typical connections for a maglock –

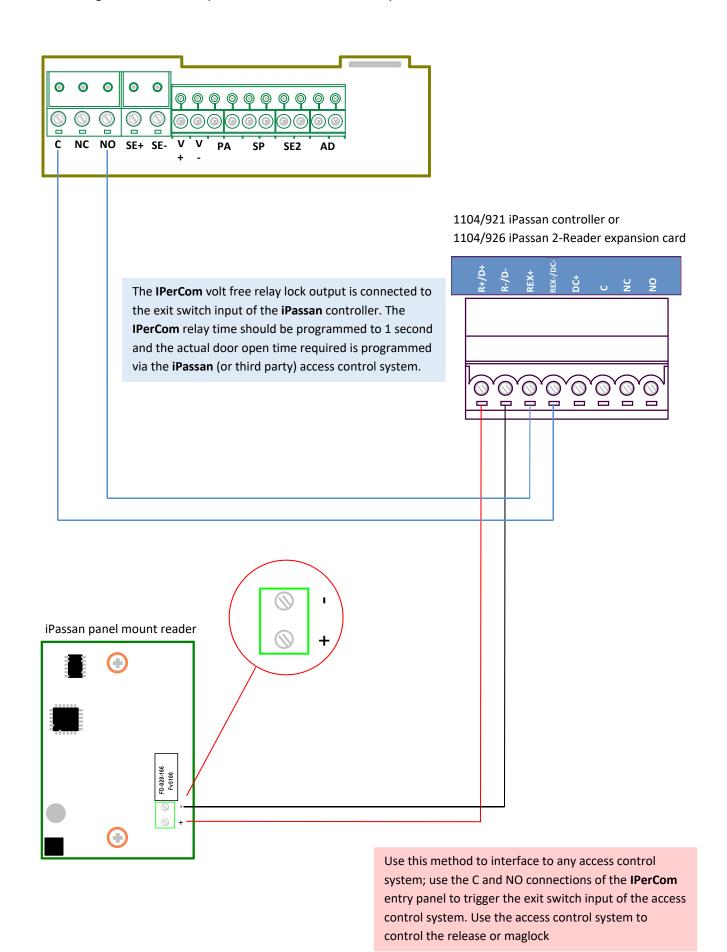

Typical connections for fail safe (fail open) electric release -

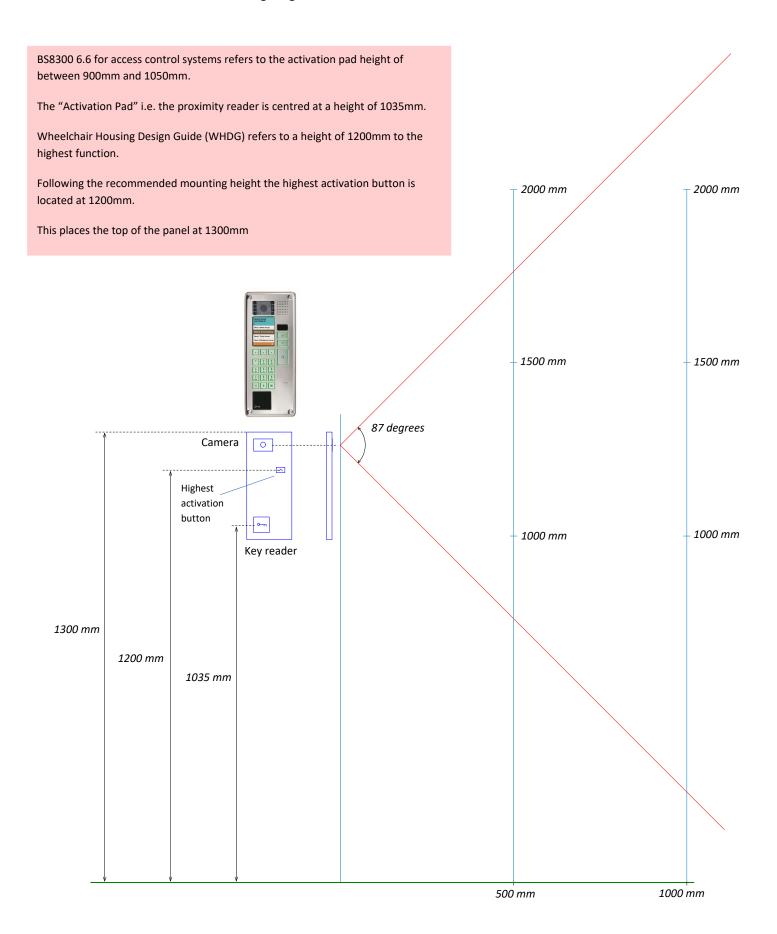

Typical connections for fail secure (fail locked) electric release -

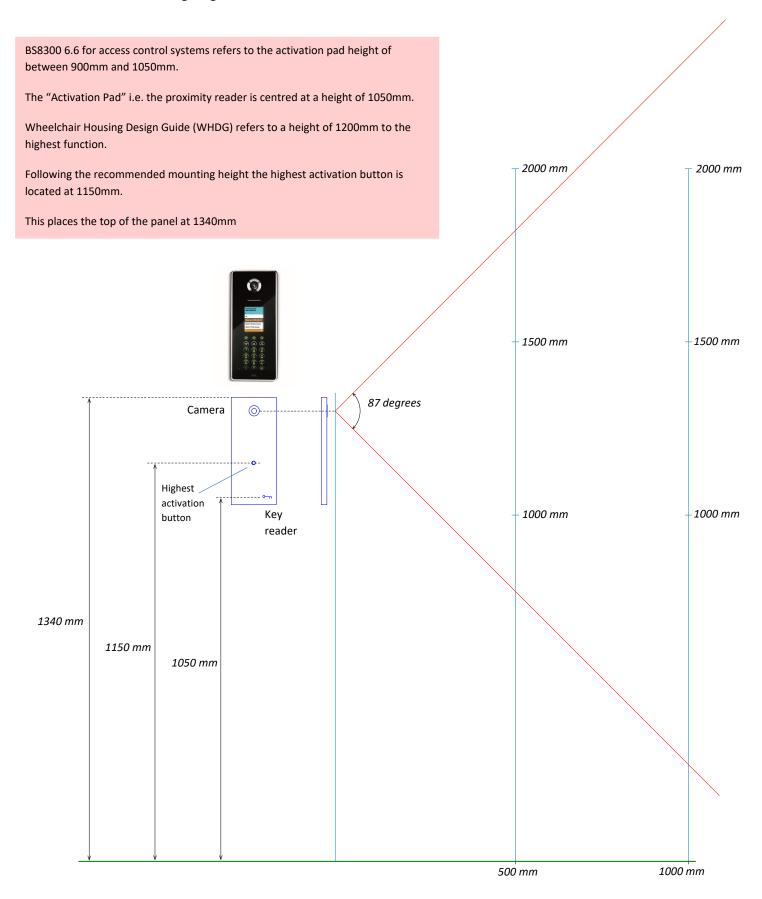

Interfacing IPerCom lock output to iPassan access control system -

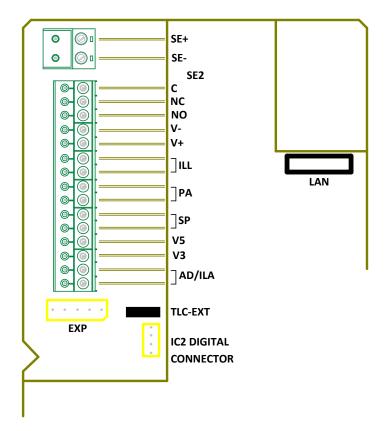

1060/18 & 1060/19 mounting height

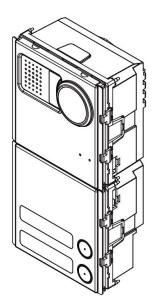

1060/13 mounting height

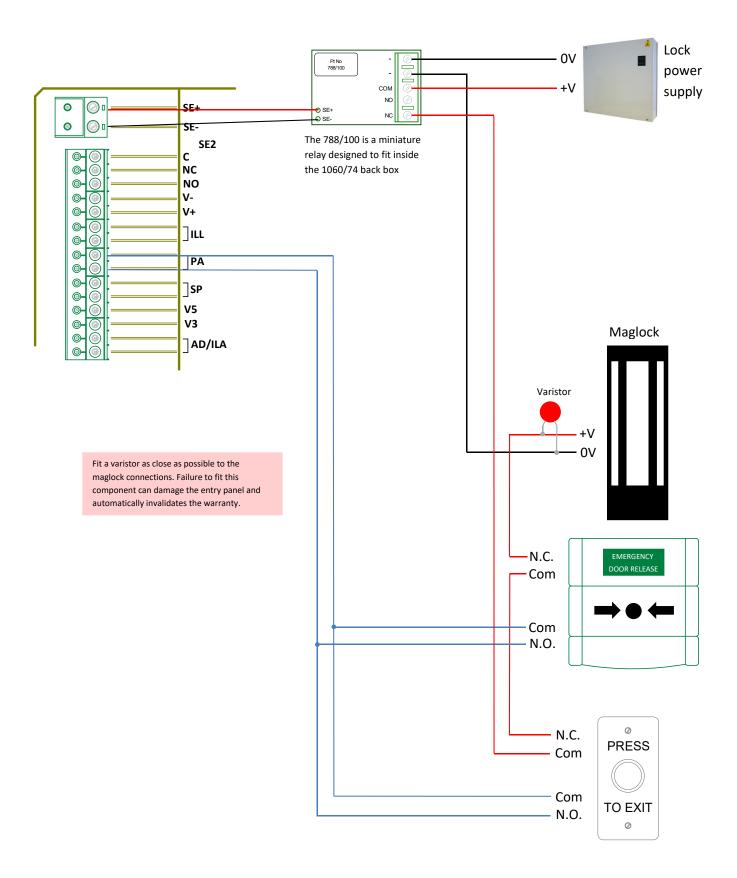

1060/74 Sinthesi Steel entry panel module

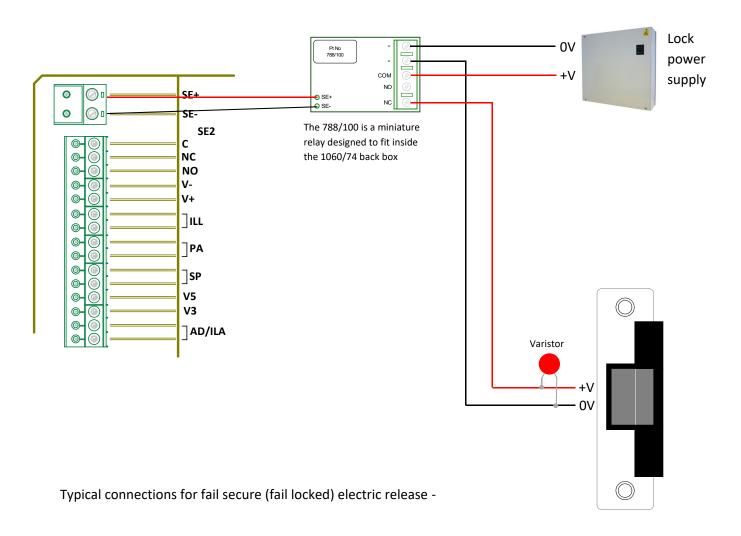

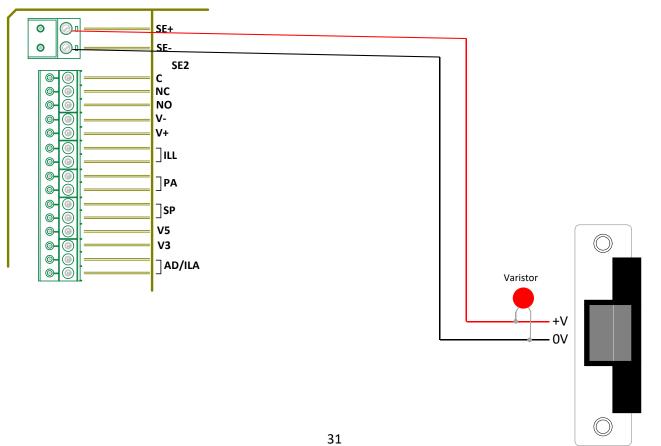

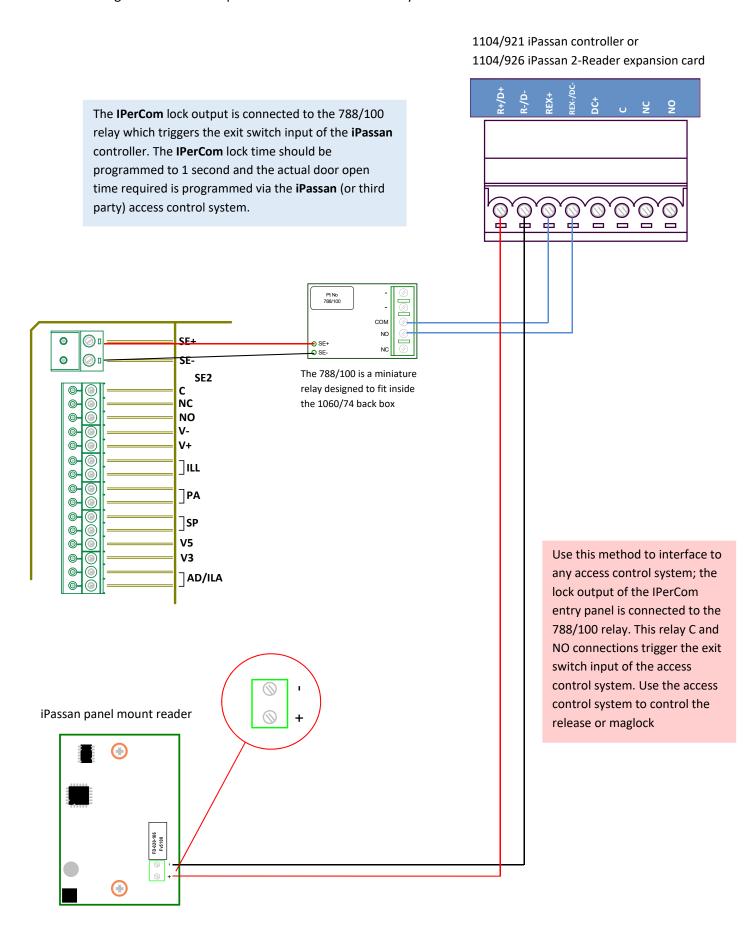

- **LAN** Network connection to PoE network switch port
- **SE+ SE-** Output for direct connection to a *fail secure* (*fail locked*) release.
- **SE2 C NC NO** Voltage free relay output specifically for triggering vehicle automation systems. This output is triggered by the button with one 'dot' on the monitor or handset.
- V+ V- Input for a local power supply, for use when PoE is not available. 44 57V DC @ 200mA
- **ILL** Output to illuminate further button module nameplates
- **PA** Input for a normally open push to exit switch.
- **SP** A normally closed door contact (going open when the door is opened) can be connected to this input and will report a 'Door open' message at the concierge switchboard (where fitted).
- V5 External CCTV camera input Ground
- V3 External CCTV camera input Signal
- AD/ILA Input for 1158/48 Hearing Aid Module
- **EXP** Connector Used to connect 1158/12 and 1158/14 Button modules. See the product manual supplied with the 1060/74.
- **IC2 DIGITAL CONNECTOR** Used to connect 1158/47 DDA Module. See the product manual supplied with the 1158/47.
- TLC-EXT Jumper should be in the ON position if an external CCTV camera is connected to V3 & V5.

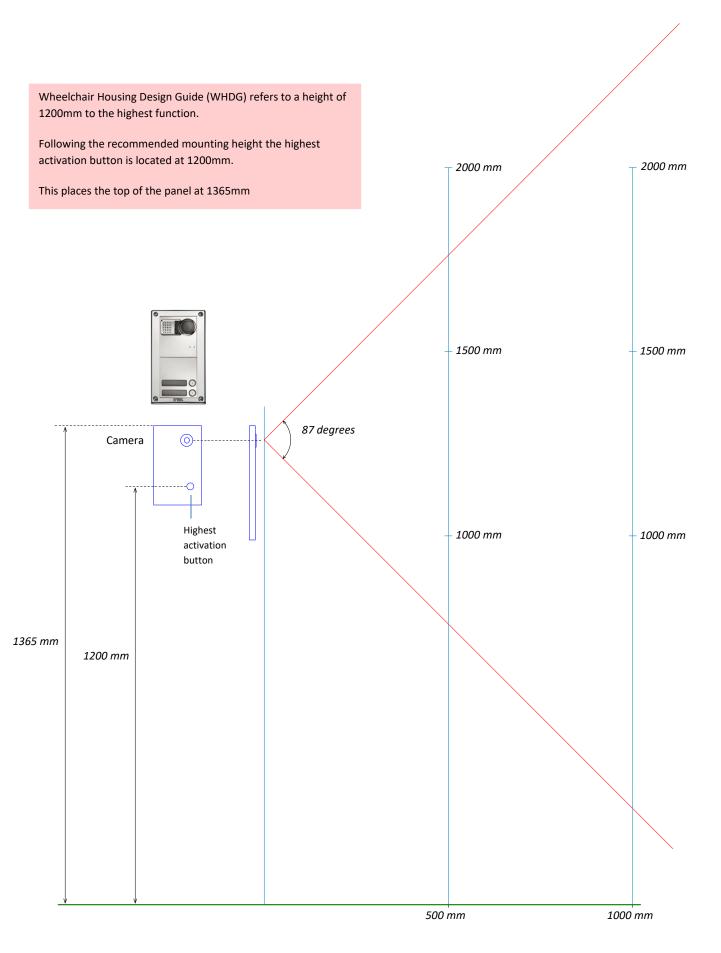

Typical connections for fail safe (fail open) electric release -

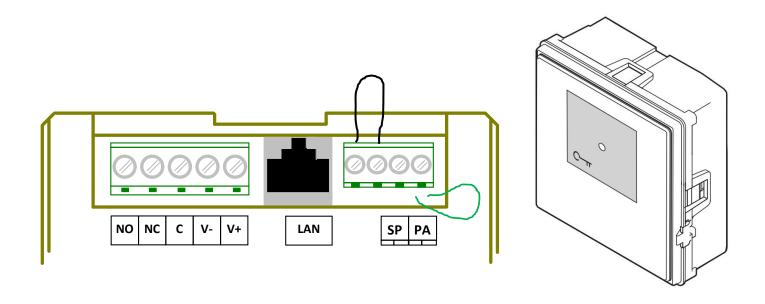

1060/74 mounting height

1060/82 proximity key reader module

NO NC C – Voltage free clean contact lock release output rated at 30V @ 3.5A

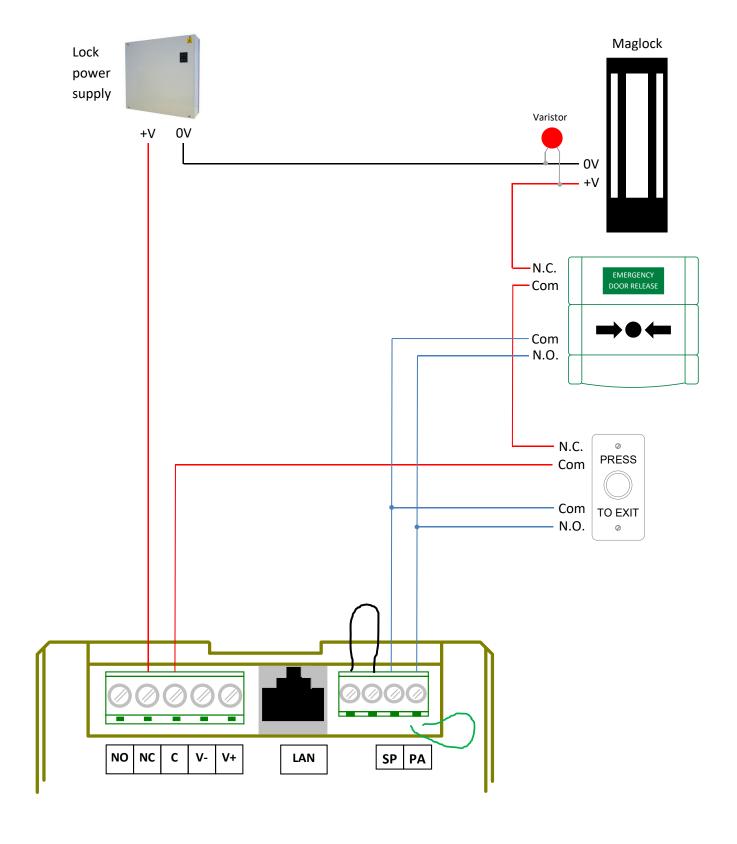

V+ V- Input for a local power supply, for use when PoE is not available. 44 – 57V DC @ 200mA

LAN – Network connection to PoE network switch port

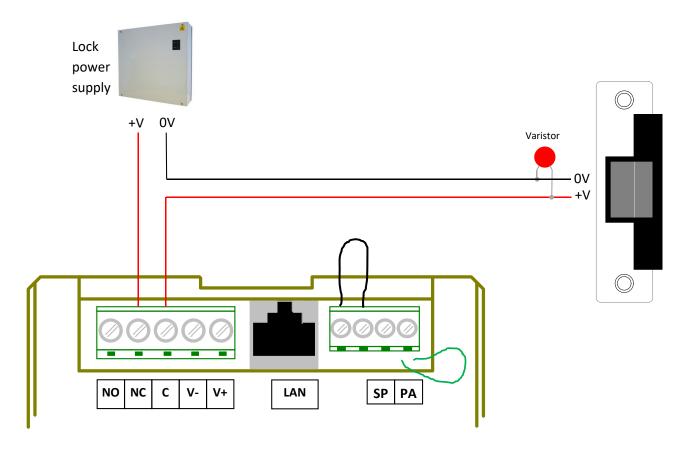

SP - A normally closed door contact (going open when the door is opened) can be connected to this input and will report a 'Door open' message at the concierge switchboard (where fitted). By default the input is linked. This link must be removed if a door contact is being used.

PA - Input for a normally open push to exit switch.

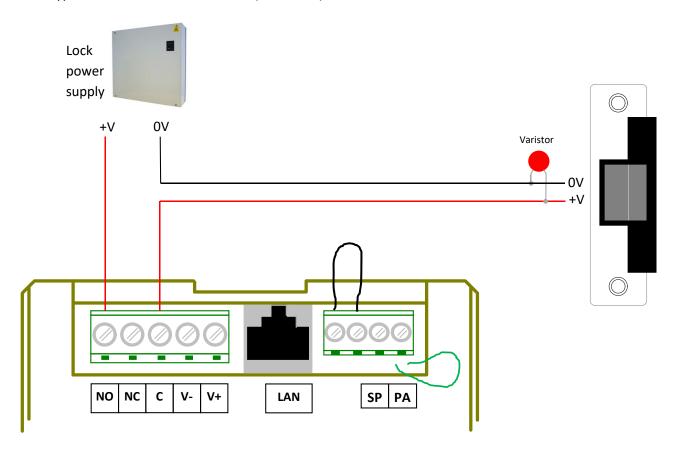

The green loop wire can be used to connect a normally closed tamper switch – see the manual supplied with the product.

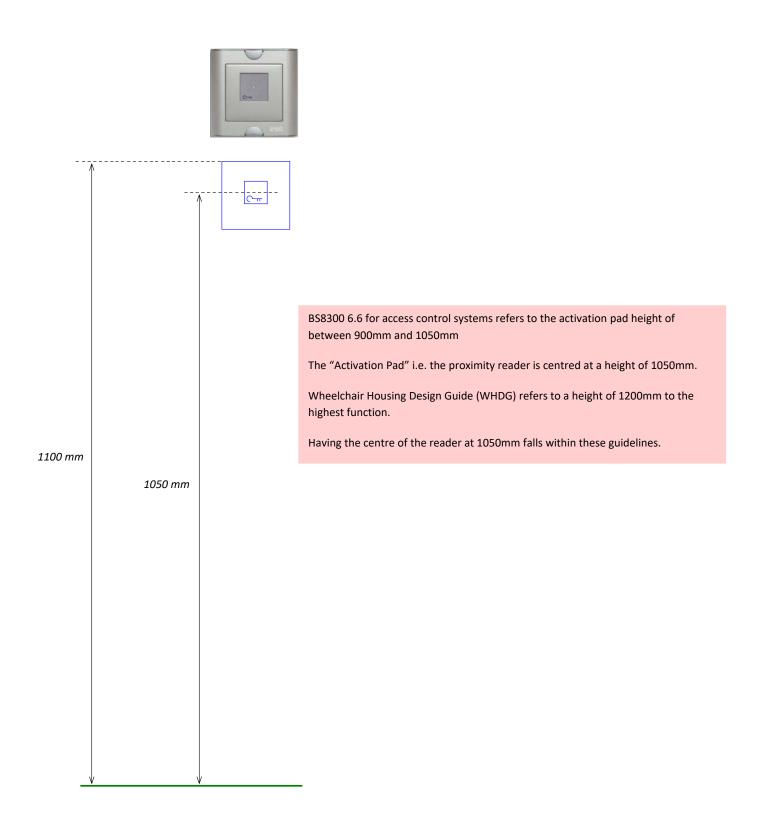

Typical connections for fail safe (fail open) electric release -

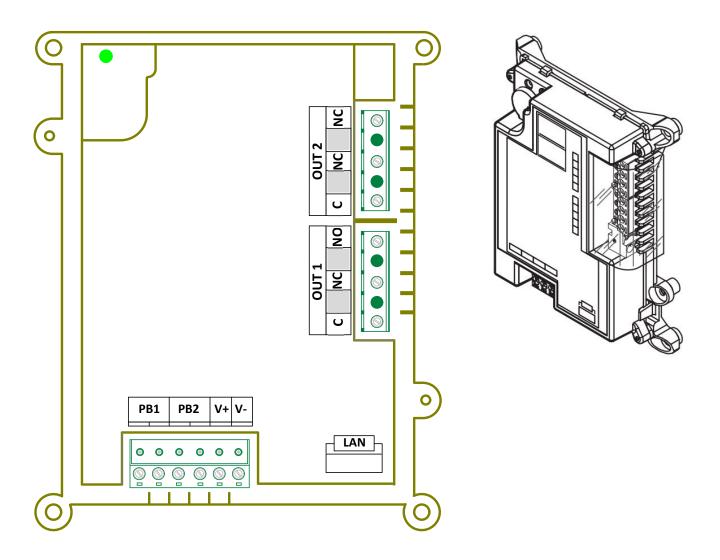

Typical connections for fail secure (fail locked) electric release -

1060/82 mounting height

1060/84 Relay Module

- **PB1** External normally open clean contact input 1
- PB2 External normally open clean contact input 2
- OUT1 NO NC C Voltage free clean contact relay output rated at 30V DC @ 5.0A or 250V AC @ 5.0A
- OUT2 NO NC C Voltage free clean contact relay output rated at 30V DC @ 5.0A or 250V AC @ 5.0A
- V+ V- Input for a local power supply, for use when PoE is not available. 44 56V DC @ 50mA
- **LAN** Network connection to PoE network switch port

LED Functions –

Slow blinking = acquisition of IP address in progress.

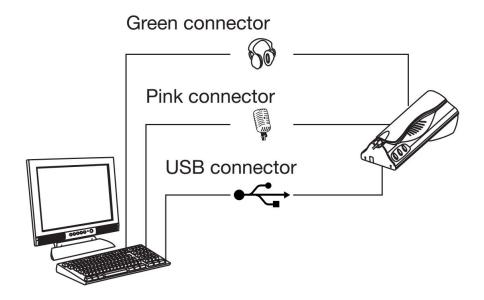

Steady on = IP address has been obtained

1060/41 Concierge Handset

Plug the loudspeaker connector (green connector) into the PC loudspeaker output

Plug the microphone connector (pink connector) into the PC microphone output

Plug the USB connector into a spare USB port on the PC

Internal connection -

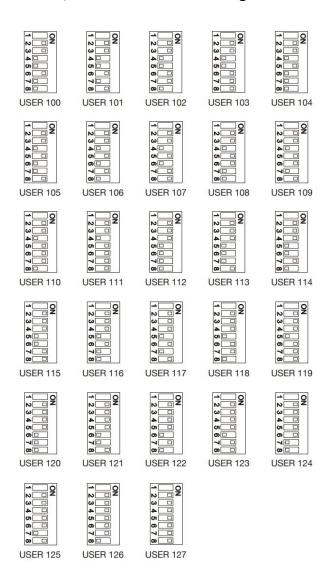

S+ S- Connection for 1072/59 External Sounder

It is not necessary to install driver software for the 1060/41 Switchboard Handset. Installation starts automatically when the USB connector is plugged into the PC.
